

RANDI YULIO FAJRI

Web Engineer | Fullstack Developer

✉ randijulio13@gmail.com

🔗 randijulio13.github.io

🏠 Palembang, Indonesia

Fullstack Web Engineer with experience building and maintaining web applications across frontend and backend, including system integration and basic infrastructure observability. Experienced in developing backend APIs, implementing frontend interfaces with modern frameworks, and collaborating with cross-functional teams to deliver reliable web solutions.

EDUCATION

Informatics Management

From August 2017 to October 2020

State Polytechnic of Sriwijaya Palembang

TECHNICAL SKILLS

Backend

Laravel, Node.js (Express.js), RESTful APIs, JWT-based authentication, Queue & Background Workers

Frontend

Javascript, React.js, Vue.js, Next.js, Nuxt.js

Monitoring & Observability

Grafana (Dashboards, Loki, Alloy), Prometheus, Alertmanager, Docker, Kubernetes (kubect!), Git

WORK EXPERIENCE

Web Engineer

Since September 2024 (1 year)

OXY Creative Jakarta Selatan, JK, Indonesia

- Contributed to frontend development of a web-based inventory management system, delivering features for asset tracking, stock movements, and operational dashboards.
- Implemented responsive and reusable interfaces using Next.js, incorporating client requirements and iterative feedback into production-ready UI components.
- Worked cross-functionally with stakeholders and QA teams to troubleshoot issues, refine features, and improve overall system reliability.
- Collaborated with DevOps engineers to deploy and validate a Kubernetes-based observability stack using kubect!, integrating Grafana, Prometheus, Alertmanager, Loki, and Grafana Alloy to support system monitoring and alerting.

WORK EXPERIENCE

Fullstack Developer

From March 2024 to June 2025 **(1 year)**

PT. Immobi Solusi Prima Jakarta Selatan, JK, Indonesia

- Contributed to the frontend development of AVP, a centralized dashboard container platform used by Telkomsel to embed and manage internal dashboards built with PowerBI, Grafana, Tableau, and React.
- Designed and implemented complex, dynamic user interfaces using Next.js and Ant Design, addressing diverse business and UI/UX requirements from multiple stakeholders.
- Developed reusable frontend components to support iframe-based dashboard embedding, including contextual behaviors such as loading states, error handling, dynamic height adjustment, and layout responsiveness.
- Collaborated closely with UI/UX designers and product owners to translate high-fidelity mockups into responsive, accessible, and pixel-accurate implementations.
- Integrated frontend functionality with backend services to enable secure single sign-on (SSO), access control workflows, dynamic dashboard visibility, and large-scale data export features.
- Contributed to frontend architectural discussions to improve modularity, performance, and maintainability in a fast-evolving product environment.

Web Developer

From March 2024 to April 2025 **(1 year)**

PT. Trisan Esa Cipta Palembang, SL, Indonesia

- Developed an internal management system for a residential property development company to automate workflows across housing catalog, construction, and sales processes.
- Implemented modules to manage residential data, unit blueprints, construction progress tracking, and sales workflows, including document validation and client onboarding.
- Built supporting systems for workforce payment scheduling, building material inventory tracking, order processing, and material usage logging (incoming and outgoing).
- Implemented backend logic to support business workflows and maintained data consistency across procurement, construction, and finance operations.

Web Engineer

From February 2022 to March 2024 **(2 years+)**

OXY Creative Jakarta Selatan, JK, Indonesia

- Developed multiple applications focused on identity verification and onboarding automation for financial and rental service platforms.
- Implemented secure onboarding workflows by integrating with national identity services (Dukcapil) for demographic data validation, facial biometric verification, and credit assessment systems for eligibility checks.
- Designed and built an event-driven microservices architecture to detect and flag duplicate records in large-scale datasets using biometric matching and similarity scoring techniques.
- Architected asynchronous service communication using RabbitMQ to decouple processing workflows and improve system reliability.
- Ensured scalability and fault tolerance across services handling millions of personal records through resilient messaging and service design.

Fullstack Developer

From February 2021 to February 2022 **(1 year)**

PT. Hedo Global Technology Palembang, SL, Indonesia

- Developed and maintained a warehouse inventory system covering stock tracking, item movements, order processing, damaged goods handling, and reporting.
- Integrated real-time stock synchronization with an external e-commerce platform to maintain consistent inventory data across sales channels.
- Contributed to backend refactoring and performance improvements to enhance maintainability of existing systems.
